

Real-Time Machine Monitoring Platform

- IoT based solution for remote machine management
- Preventive maintenance planning
- Real-time updates, management, and monitoring
- Reduced Repair Costs

Real-Time Machine Monitoring Platform

An IoT-based solution that allows you to control, update, manage and monitor your machinery remotely and in real-time.

Reduce repair costs to an absolute minimum by closely monitoring machine parameters and determining prescriptive maintenance.

Machine Performance Monitoring

Monitor your overall equipment effectiveness with live information from machines to ensure everything is running smoothly. Depending on your industry and the level of automation, Tweddle can bring in experts that link your machine data to our technical information sources.

Remote Firmware Updates

The software running on the machine can be updated when a new version is available, and this can be done and managed via the platform.

Real-Time Machine Monitoring Platform

We simplify technical documentation challenges for OEMs, as even the best technicians get challenged

Geo-location Mapping

The geo-location map allows the OEM to directly link the asset location via a visual view. Tweddle integrates this viewer as part of the user interface of the platform.

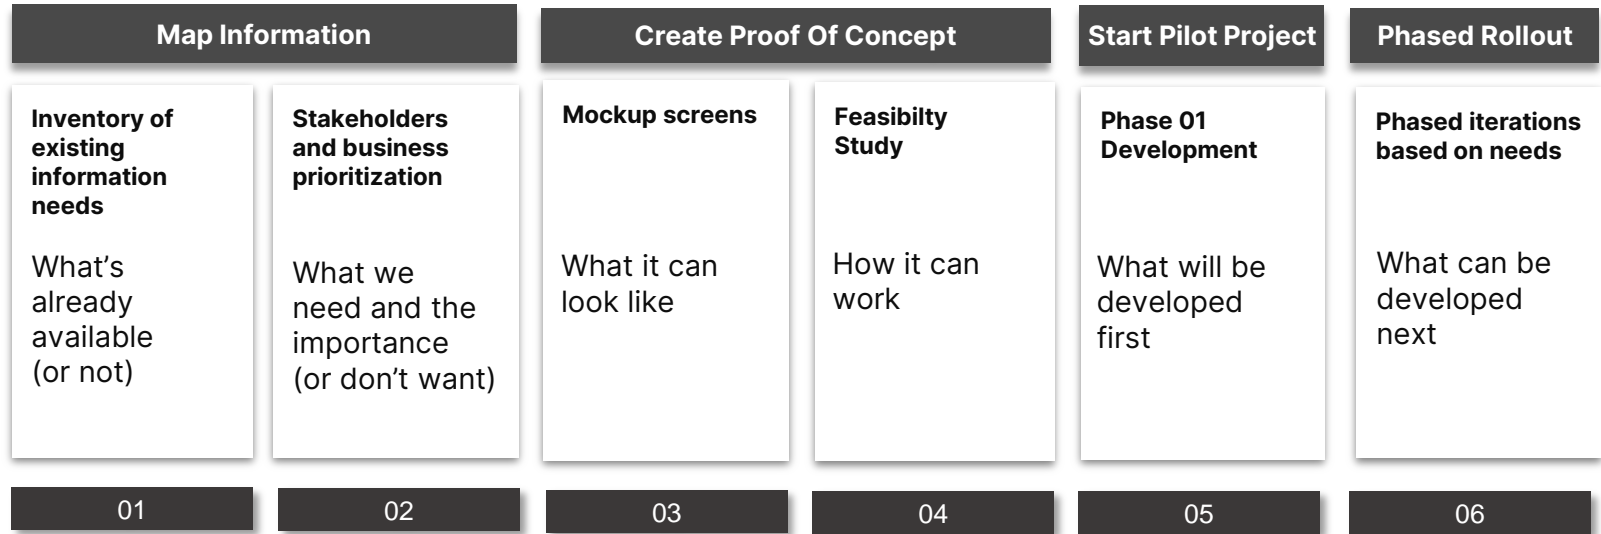

Parameter-based Preventive Maintenance

It is good practice to monitor machines to take preventive maintenance actions when and where needed. The Tweddle real-time platform lets you assess this based on different parameters. Our technical information about each machine is integrated into the monitoring environment, putting the relevant information at the fingertips of your technicians.

OEM Dashboard with relevant data

We provide a meaningful and easy-to-use dashboard for the OEM to easily monitor the different parameters and alerts of their interest. You can configure this dashboard so that it perfectly matches your needs.
